

Hello! If for some reason you cannot download animations and presets, sorry for troubles.

Here is the instruction how to install them manually.

There is a folder named "Store" in the script archive.

When you have script installed, you should go to the Animation tab and then to the Gallery tab.

There is the button "Download presets". You should click on it with Options/Alt key pressed.

*It should open in your file explorer the script folder, where you will be able to find "store" folder.

You need to move all the content of the store folder from the archive to the store in the script's folder.

Then you need to reload the script and animations should show up.

* If it's not opening for some reason, you need to go:

On Mac – ~/Library/Application Support/MDS/Deekay_Tool Extension

On Win – C:\Users\[username]\Appdata\Roaming\MDS\Deekay_Tool Extension

You have to be sure that you have visible all the hidden files and folders to find the MDS folder.

On Mac you can do this by pressing Cmd+Shift+. Combination, when Finder is open.

On Windows you can do this by following the tutorial
